

CHURCH OF SANTA SOFIA BENEVENTO - ITALY

Credits

Category: Churches
Location: Benevento - Italy
Type of work: Interior Lighting
Lighting Design: Filippo Cannata
Completed: 1999

The lighting project was developed to address both the functional aspects and enhance the architectural features of the historical building. The church is a fine example of medieval architecture with very interesting plan layouts. The fixtures that are discrete and unobtrusive, were placed circularly on the capitals in order to get optimum beam angles and visual comfort. The basic idea of this project is a minimal level of illumination, light weaves simple plots creating a rarefied and mystic atmosphere which facilitates the meditation.
