Type of work: Urban Lighting
Lighting Design: Filippo Cannata
Lighting Design team: C.Masone
Completed: 1999

The formal research for these road illumination poles designed by the architect Emilio Ambasz brought very interesting results. The wish to create unusual and amusing shapes, able to gladden the run of the roads, together with the wish to reduce to the least terms the bright pollution, produced solutions characterized by a great aesthetical and functional impact. Shortly: the environmental sustainability and the ludic aspect create a new approach to the development of the urban illumination theme through the wise use of the technologies employed by Cannata&Partners.
